Canada's Environmental Bureaucratic Effort to Introduce Monetary Penalties

The rest of the world is mired in rising sea levels that never happened, and taxing carbon that trees breath. Environment and Climate Change Canada is similar to our american counterpart Environment Protection Agency, only in the USA, they hand out heavy fines.

Ontario Drive Clean Program Eliminates Emission Testing

In the 90s, smog was bad and the Ontario government began mandatory emissions testing. The program has been scrapped saving taxpayers $40 million a year and a new VEEU enforcement agency has been established testing upto 3,000 vehicles a year. With hydrogen, biofuels, and premium octane enhancers hitting the streets. Is it enough? **ontario.ca/page/vehicle-emissions-inspections**

UAE to participate in Seoul Korea Weather Modification

Americans are terrified at Chemtrails in the sky and for over 50 years people have been modifying the weather with cloud seeding technology. Sometimes it's as harmless as dry ice, and other times an environmental controversy. **wam.ae/en/details/1395302799898**

The Roaring Twenties, Blaming Spain and Leaded Petrol

Do you remember 1923? I don't. In fact nobody seems to remember much about prohibition. We were all wasted. And those who weren't were reaching for gas masks and drinking lithiated carbonated health beverages. Find out what's killing us now by searching "SarsCoV2" cause "coronavirus" and "covid" mean absolutely nothing. Boycott premium gasoline, and leave some cookies out for santa. Save lives.

Moosehead Malt, Indian Pale Ale Beer, and Oland

Moosehead founded as Oland Breweries in 1867 is said to be made from pale ale malts. In 1919, Congress approved the Volstead Act, which limited the **alcohol content** of all beverages to 0.5%. Was the alcohol too high before? This beer may have been closer to a tonic, a high carbon malting process designed to pull toxins out from the body.

Suicide Tourism to Switzerland : WTF!?!?

In the United Kingdom this is illegal, but the only company hiding behind a country and a corporate name providing this service claims to have provided 111 suicides to United Kingdom citizens.

Extremely Old People Dropping Dead Shortly After Coming Forward About Thier Age

In other words, no ratting out the old people. There are strange people all around this world who think magically and also practice things like magic bean herbalism, and voodoo resurrections. GTFO, I am serious. No tampering with the old people.

J. Dillinger's Exhumation Halted as Rwanda, Panama, Iraq, and Covid Bodies Begins

Holograms can fuck with your mind, and trust me, we all dream an american dream. Some people have been fucked so hard, they're digging up bodies to see exactly what happened before the evidence went missing.

Soapy taste of coriander linked to genetic variants

Researchers are beginning to identify genetic variants behind the mixed reception for the herb *Coriandrum sativum*, which North American cooks know as cilantro, and their British counterparts call coriander. **nature.com : tinyurl.com/ybkmzyvp**

Catfish and Soap Bait

Soap tastes bitter and Catfish love the taste! They also live the longest in thier environment. Our taste receptors normally sense soap as a highly toxic and bitter taste and that's because soap is indeed soap. We need it to clean out all the nasty dirt from our bodies once and awhile. Stick to bitter tonics and beverages rather than bar soap please!

youtube.com/watch?v=0euY1j15Q60

sites.psu.edu : tinyurl.com/y7umx8ef

The idea that sweet is tasted at the tongues tip is almost right. Taste receptors are active across the ENTIRE tongue and there's more than sweet, salty, bitter and sour. Japanese scientists have discovered umami (savory) taste receptors and chemists in Philadelphia are reporting a new taste sensation that they term "calcium."

4km Deep North from Kennedy Lakes New Brunswick, Canada

47.0°N 66.5°W Earthquakes happen all the time, and this area is no different, or is it? An earthquake cluster 4.2km deep 8x8km^2 along a plane only a carpenter's level could make. Could it be a hot spring underground ? Over 20 +2 richter scale quakes since 2010.

Paradox of Choice youtu.be/F4QzhSlqmqg

These animated videos took the internet by storm, and I mean this media factory pumped this format out to hundreds so they could reach millions.

Quick Stats by Yours Truly 4,157 commited suicide in 2017. In 2019, 382,533 Canadians were born, and 313,580 immigrants moved in and there were 208,69 housing starts recorded in Canada in 2019. More than enough unless you're living with a troupe of poltergeists. 82,100 died by cancer. 1,922 by car accident. 14,700 by overdose. 15,000+ are predicted to die by SarsCoV2. **statista.com**

Land of the Free, Home of the Brave

"Romans" added V's to just about anything. Repuvlics, Venus, ect… Could the Brave be one step away from finding Bræ? The last to the bright ones? The Britannia's? It's anybody's guess, honest. Skara brae sits at the top north east corner to the Scottish mainland. Wee little buildings, perhaps where the we people were. But where is the slope?

Shetland Slope near Brae

"steep slope," in northern England especially "the side of a hill," early 14c., from Scottish, "slope, river bank," perhaps from Old Norse *bra* "eyelash," cognate with Old English *bræw* "eyelid," German *Braue* "eyebrow" (see **brow**). "The word must have passed through the sense of 'eye-brow' to 'brow of a hill' **etymonline.com/word/brae**

The Ness of Brodgar site, which makes the nearby prehistoric village of Skara Brae [different than shetland brae] look like a "shanty town", has already prompted calls to have history books rewritten.

Quantum Radar : A.K.A. Lidar

Old roads seen from space can sometimes mean more than lost people migrating in empty spaces. The lost city Kweneng is over 400 years old, and is said to have been destroyed during 1820 wars. Using light emitting radar lasers the city has been uncovered without using a shovel. Imagine what's hiding along the Silk road!

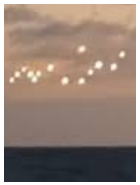
Canadians spotted 3 UFOs per day in 2017: survey

2017, Montreal was the country's UFO-sighting capital.

ctvnews.ca : tinyurl.com/y93k7my2



Real UFO Video Shows Several Bright Lights Hovering off N.C. Coast

They show up on radar, there are gravitational wells around the world on satellite imageries, they are being shot out from the sky and they are also bringing back medieval thoughts on valkyries, angels, magic carpet rides, you name it. They're real and here to stay. Maybe hollywood should make some new theme parks or designate some holographic zoning bylaws or something, eh?
